

SHAHMEER MALIK

760-212-0696 – malikshahmeer.ms@gmail.com – linkedin.com/in/shahmeer-malik-30b3b822b

SOFTWARE ENGINEER

Full-stack software engineer with production experience in software architecture, backend and frontend development, distributed systems, data pipelines, and cloud infrastructure (AWS), including fintech-adjacent financial forecasting and RBAC-based authorization.

EDUCATION

University of Michigan

Bachelor's degree, Computer Science – May 2024

Relevant Coursework: Computer Security, Artificial Intelligence, Advanced Data Analytics, Computer Architecture

WORK EXPERIENCE

Full-Stack Engineer

ReadySignal – Ann Arbor, MI

June 2026 – Present

- Took a vibe-coded prototype to production in 3 months with 1 other engineer, architecting Next.js, FastAPI, and MySQL to scale to 1,000,000 requests per day on a multi-tenant AWS SaaS platform for under \$200 per month
- Engineered a pipeline that iteratively runs an exhaustive subset search, falling back to greedy pruning, fit memoization, and thread-pool concurrency, to aggregate and overlay external public data for sales forecasting, improving prototype forecast accuracy from 75% to 93%
- Built an LLM chat bot supporting 10 model personalities across multiple providers, automating financial-analysis and forecast requests end-to-end across 11 SQS async jobs saving roughly 2 hours/week of support time

Software Engineer

Amazon Web Services – Herndon, VA

September 2024 – December 2025

- Redesigned production monitoring dashboards with pagination, region-based clustering, and embedded runbook links, cutting incident response time from 6 hours to 50 minutes, an 85% reduction
- Resolved a multi-region SSH outage caused by a 46GB transfer bypassing legacy rate limiting by adding pre-prod load testing (JUnit, Mocha) and payload-aware throttling
- Eliminated recurring false-positive SSH alerts by fixing a race condition between health checks and host-patching cycles, improving on-call signal reliability

PROJECTS

Solo Founder / Full-Stack Engineer

MiraajGames.com – Remote

February 2026 – Present

- Architected a production-grade full-stack platform using a custom Node.js REST API server and PostgreSQL, shipping 18+ browser-based applications end-to-end
- Engineered JWT-authenticated WebSocket connections, a GDPR-compliant payment flow, and cursor-paginated messaging serving 500+ messages per week
- Deployed and operated AWS infrastructure with a TLS reverse proxy, reducing monthly compute costs by 65% through load profiling and right-sizing

SKILLS

Programming Languages: Java, TypeScript, JavaScript, Python, Go, Bash, C, C++, SQL

Frameworks and Tools: REST APIs, microservices, FastAPI, React, Next.js, Node.js, SQLAlchemy, Pydantic, Alembic, WebSockets, JUnit, Mocha, pytest, automated testing

Cloud and Infrastructure: AWS (EC2, SQS, ECS Fargate, CloudWatch, DynamoDB, IAM, VPC), Terraform, VPC peering, networking, distributed systems, Docker, LocalStack, Twingate, Turborepo, pnpm, CI/CD, DevOps

Databases and Tooling: MySQL, PostgreSQL, NoSQL, Postman, DataGrip, Git, GitHub, code review

Engineering Practices: software architecture, technical documentation, debugging, root-cause analysis, compliance, authorization/RBAC, cross-functional communication, collaboration, Agile
